

Defect ID	Defect Description	Steps to Reproduce	Priority	Severity	Status	Created By	Assigned To	Screenshot
1	On the Home page, applying the "Sort by: Price low to high" option under the Food and Beverages category does not arrange listings in ascending price order. Items with higher "for two" prices appear ahead of cheaper ones.	1. Open the MagicPin app Home page. 2. Apply the category filter "Food and Beverages". 3. Apply "Sort by: Price low to high". 4. Scroll through the resulting list and compare the displayed prices.	High	Critical	New	Janasi Jaiswal	Raghavendra BN	
2	On the More Filters panel, only a single category (e.g. Pharmacy) can be checked at a time. There is no way to select an additional category alongside it without first clearing the current selection.	1. Open the Home page and go to a category listing (e.g. Pharmacy). 2. Open "More Filters" > "Category Filters". 3. Select one category checkbox. 4. Try to also select a second category without unchecking the first.	High	Major	New	Janasi Jaiswal	Raghavendra BN	
3	The Home page does not detect the user's exact location after permission is granted and displays an incorrect location. Furthermore, when searching within the ordering flow, the location resets to "New Delhi" instead of retaining the user's selected or granted location.	1. Grant location access and confirm the Home page shows the correct location. 2. Move into the ordering/search flow and search for an item (e.g. "Biryani"). 3. Observe the location shown above the results.	High	Critical	New	Janasi Jaiswal	Raghavendra BN	
4	The Magic Coins balance shown in the top-right corner does not stay consistent across pages. After navigating to sections such as Online Vouchers or Restaurant listings, the balance displays 0 instead of the actual accumulated coin balance.	1. Note the Magic Coins balance shown on the Home page. 2. Navigate to the "Online Vouchers" section (or another category tab). 3. Check the Magic Coins balance again in the top-right corner.	Medium	Minor	New	Janasi Jaiswal	Raghavendra BN	
5	The location label used in the top navigation shows only the broad city name "Greater Noida" rather than the more specific locality the user actually granted (e.g. "Alpha 1, Greater Noida"), even though that specific location was already detected and shown elsewhere in the app.	1. Grant location access to the app. 2. Confirm the Home page detects the specific locality (e.g. "Alpha 1, Greater Noida"). 3. Open the top navigation / category tabs (e.g. Restaurant) and check the location label shown there.	Medium	Major	New	Janasi Jaiswal	Raghavendra BN
